Dear Mr. Walls,

I recently learned about the potential to remove the restriction for using PVC and ABS pipes in non-residential buildings.

I am adamantly opposed to this and would like to express this to you.

Not only do plastic products burn and spread fires but they also produce toxic fumes while burning.

Cast iron pipes have always been the best alternative for many reasons. Some very important reasons I can think of are they don't burn or create toxic fumes. Not to mention they are made from 100% recycled scrap iron.

Public safety and protecting the environment should be whats most important to the Standards Commission. Please do not remove the restriction of the use of PVC and ABS pipes.

Sincerely,

Angela [illegible]
