Dear Mr Walls,

I hope you get a chance to read my letter and know the fact that I do not agree with the removal of the restriction than years ago do not allow to use PVC and ABS pipes and fittings in hospitals, nursing places and correctional treatment centers.

I am a citizen concerned about environment and Health issues for that reason I think we should be using cast iron pipes and fittings for now due to the origin of this alloy (It is 100% recycled). Plastic is toxic, is not recycable plus catch fire easier than Iron.

Best Regards,

Monica Perez.
