Subject: greywater code

Hi there, I am writing to encourage a clear passage of a usable greywater bill. Water is absolutely the most important issue in the lives of Californians. above petroleum or any other issue. We are in a drought time, and with global warming, it is only increasing. Water is the most precious resource for the millions of residents of this state. Being able to reuse greywater with the blessings of our government is a positive and a must. The benefits of being able to reuse washing machine water, shower water, dish water, are all important resources that we should all be using to save on other water sources.

Thanks for being a conscious decision maker for the benefit of all Californians
