California Building Standards Commission
2525 Natomas Park Drive, Suite 130
Sacramento, CA 95833

Attn: Dave Walls, Executive Director

Dear Mr. Walls,

I am a concerned citizen not only for the safety of our people, our environment but also for the state of the economy in California.

Removing the restrictions placed on the use of PVC and BAS pipes and fittings won't help anybody. The toxic fumes from plastic pipes in a fire is harmful to our health; fires spread quicker and plastic does nothing for the environment, but add to the tremendous amount of waste.

Cast Iron pipes and fittings are made 100% from scrap iron. In contract to plastic, they don't burn or cause toxic fumes.

I am assuming that the purpose for a building commission is to assure the public security of anyone in these types of buildings and to ensure the use of environmental friendly supplies.

Thank you

A concerned citizen
Zeydi Gutierrez
