

STATE ALLOCATION BOARD

1130 K Street, Suite 400
Sacramento, CA 95814
<http://www.opsc.dgs.ca.gov>

Date: February 22, 2010

To: Interested Parties

Subject: **NOTICE OF THE STATE ALLOCATION BOARD
IMPLEMENTATION COMMITTEE MEETING**

Notice is hereby provided that the State Allocation Board Implementation Committee will hold a meeting on *Thursday, March 4, 2010* from 8:00 a.m. to 1:00 p.m. in the California State Capitol, Room 447, Sacramento, California.

The Implementation Committee's proposed agenda is as follows:

- 1) Convene Meeting
- 2) Acceleration of School Construction Projects & Funding Priorities
- 3) Seismic Mitigation
Discuss proposed "imminent threat" criteria for the purpose of DSA identifying school buildings that may be eligible for Seismic Mitigation funding.

Any interested person may present public testimony or comments at this meeting regarding the issues scheduled for discussion. Any public input regarding unscheduled issues should be presented in writing, which may then be scheduled for a future meeting. For additional information, please contact Sue Genera at (916) 445-4320.

A handwritten signature in black ink, appearing to read "Lisa Kaplan".

LISA KAPLAN, Chairperson
State Allocation Board Implementation Committee

Individuals who need auxiliary aids for effective participation are invited to make their requests and preferences known to Sue Genera at (916) 445-4320 five days prior to the meeting.

STATE ALLOCATION BOARD
IMPLEMENTATION COMMITTEE MEETING
March 4, 2010

ACCELERATION OF SCHOOL CONSTRUCTION PROJECTS & FUNDING PRIORITIES

PURPOSE OF REPORT

To provide the Implementation Committee with information on fund releases so that methods for the acceleration of school construction projects and funding priorities can be discussed.

BACKGROUND

On December 17, 2008, the Pooled Money Investment Board (PMIB) took action to temporarily halt disbursing cash from the State's Pooled Money Investment Account for capital projects, including public school construction projects. This action placed school districts that received a State Allocation Board (SAB) apportionment prior to December 17, 2008, in a difficult position to meet the 18-month time limit to qualify for a fund release as stipulated in Education Code Section 17076.10 and School Facility Program (SFP) Regulation Section 1859.90.

In order to ensure that school districts could continue to meet statutory and regulatory requirements, the SAB approved emergency regulatory amendments to Regulation Section 1859.90 and adopted Regulation Section 1859.96 at the January 14, 2009 SAB meeting. These emergency regulations enabled the Board to find that apportionments prior to December 17, 2008 were inactive and provided temporary relief to districts from the 18-month requirement.

The State Treasurer's Office was successful in selling General Obligation Bonds in March and April, and the Department of Finance provided \$2 billion from these sales to SFP projects. Bond sales in October and November provided an additional \$529 million, which allowed the SAB to provide fund releases to all projects apportioned as of December 10, 2008.

Since bond funds became available to fund previously inactive apportionments, the Board approved an item at the November 2009 SAB meeting to reactivate the 18-month time period pursuant to SFP Regulation Section 1859.96.

DISCUSSION

For information regarding project apportionments set to expire due to the 18 month time limit on fund release, please see Attachment A.

As of February 1, 2010, there was over \$600 million in cash available to apportioned projects for fund releases. For a list of projects that received fund releases, please see Attachment B. For a list of projects that have not received a fund release, please see Attachment C. For a visual representation of projects eligible for fund release by program, please see Attachment D.

Recently, some stakeholders expressed concern regarding the rate at which the cash is being disbursed to districts. The concern centers mainly around the struggling economy and the need for bond funds to reach the construction market sooner.

For the purpose of discussion, the following definition for "shovel ready" has been provided by stakeholders: (1) District has signed a construction contract to commence building at least 50% of the cost of the school; and (2) the District has its local "matching" share to finance at least 50% of the cost of the school.

AUTHORITY

Education Code (EC) Section 17076.10. (d) states, "If a school district has received an apportionment, but has not met the criteria to have funds released pursuant to Section 17072.32 or 17074.15 within a period established by the board, but not to exceed 18 months, the board shall rescind the apportionment and deny the district's application.

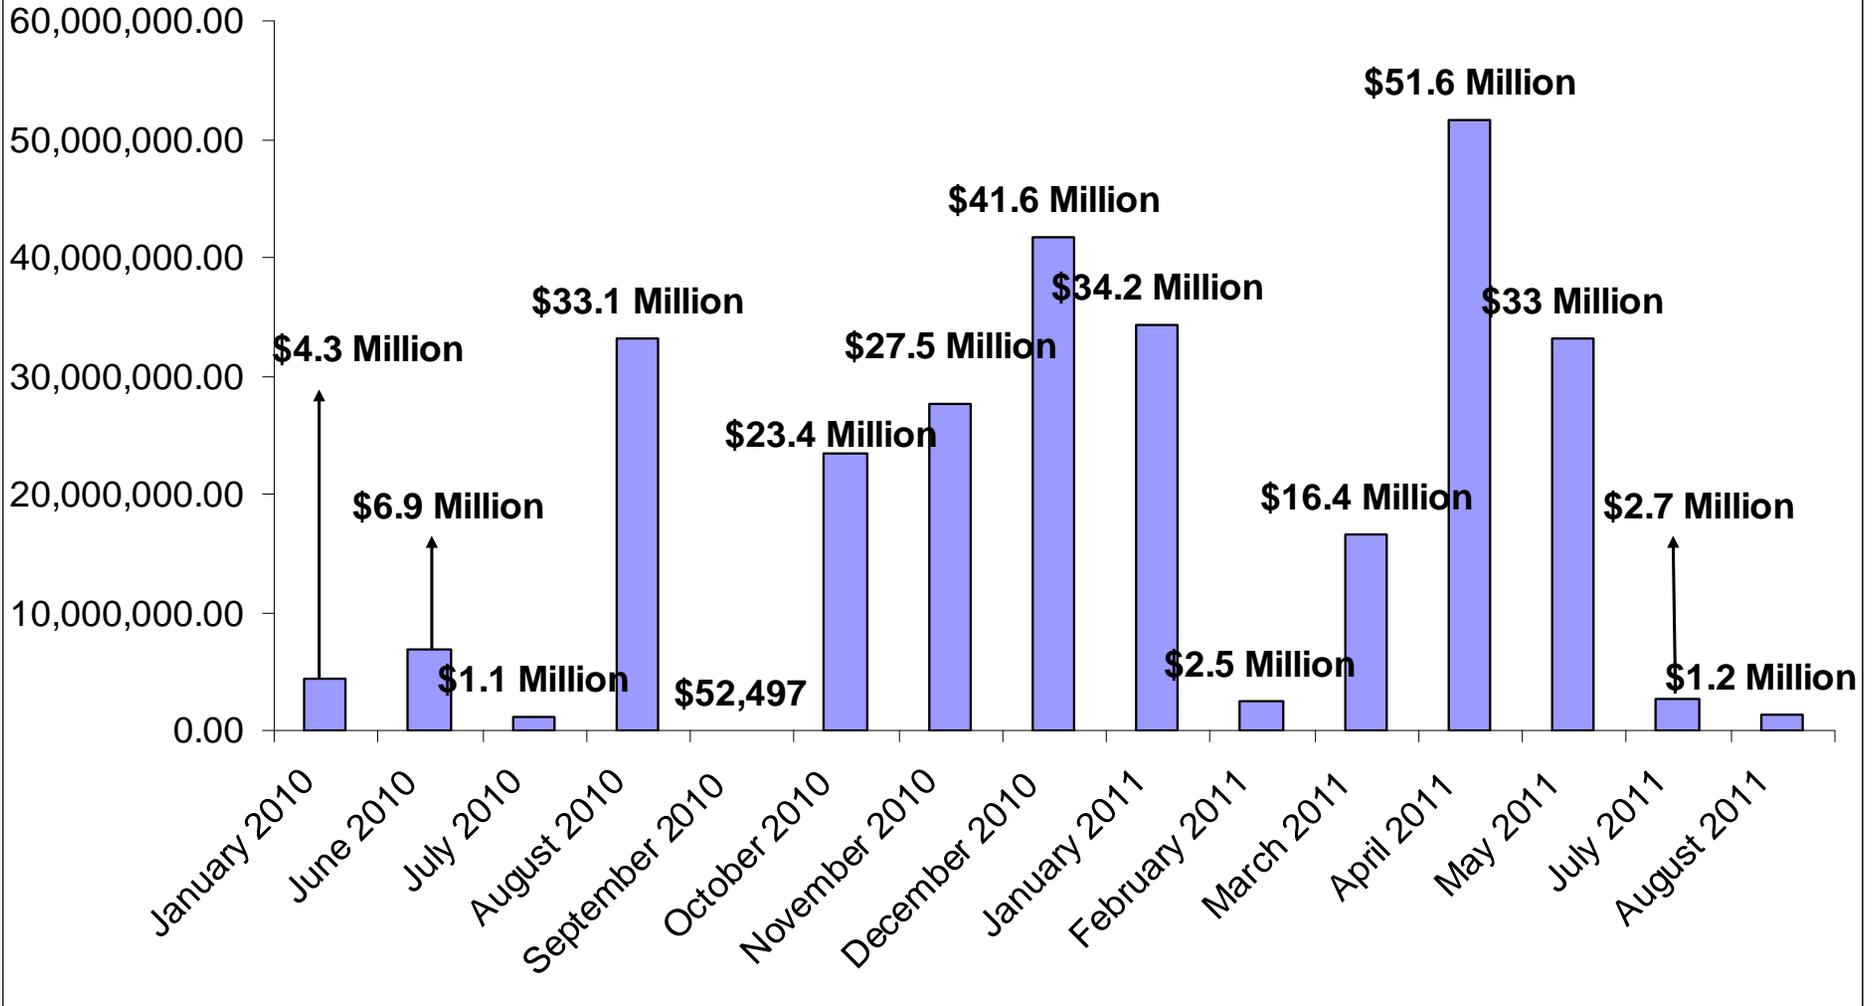

SFP Regulation Section 1859.90 states that with the exception of an Inactive Apportionment, subject to Section 1859.96, a district must submit the Form SAB 50-05 within 18 months of the Apportionment of the SFP grant for the project or the apportionment will be rescinded without further Board action.

SFP Regulation Section 1859.96 enables the Board to make a finding that a project has an Inactive Apportionment in the event of a fiscal emergency or crisis on the part of the State of California. This section also provides "... that the 18-month requirement set forth in Education Code Section 17076.10(d) is therefore suspended as of December 17, 2008 and until such time as the Board finds that State bond funds are available for the project when the balance of the 18-month time period which existed on December 17, 2008 shall resume. Once the Board finds that State bond funds are available for the project, the 18-month requirement set forth in Education Code Section 17076.10(d) shall resume but in no case shall that period of time exceed a total of 18 months while the subject project has an Apportionment. Each project will resume where its originating period of time was suspended, as of December 17, 2008. An Apportionment for projects impacted by this section is full and final, pursuant to Education Code Section 17070.63."

* Pursuant to Article 10 Regulation Section 1859.90, if the apportionment was made for a Type II Joint-Use Project, not part of a qualifying School Facility Program Modernization project, the district must submit a complete Fund Release Authorization (Form SAB 50-05) within 18 months of the date of submittal of the Division of the State Architect (DSA) and California Department of Education (CDE) approved plans and specifications to the Office of Public School Construction (OPSC).

Pursuant to Article 16 Regulation Section 1859.197, if Career Technical Education Facilities funds were reserved for the applicant pursuant to Regulation Section 1859.193(d), the district must submit a complete Form SAB 50-05 within 18 months of the OPSC acceptance of the CDE and DSA approved plans and specifications.

** "Days Remaining" refers to the number of days remaining for the 18 month time limit on fund release for listed projects as of December 17, 2008 (date of PMIB action).

Unreleased Project Funds by Program

ATTACHMENT E

Stakeholder Proposal

Problem:

Currently, numerous projects on the “Apportioned List” are not ready to go to bid, and may not be for 18 months to a year. Many new construction and modernization projects have been stalled because of the economy, and many CTE projects have the ability for reservation of funds, and haven’t received DSA approval. Although many districts would like to eventually build these projects, few if any would be willing to give up their apportionments – or guarantee of funding without an incentive. Meanwhile, there are numerous “shovel-ready” projects on the unfunded list, which if funded could bid immediately, putting people to work and stimulating the economy.

Solution:

OPSC would send a form letter to districts on the apportioned list to see if their project(s) are ready to bid. If they are willing to voluntarily delay their funding, they would be able to get an extension to their project until another infusion of bond sales is distributed to the SFP. Districts would have a right to keep their place in line on the apportionment list for funding when it becomes available. This approach has been used by the SAB before. The State “stopped the clock” on the 18 month deadline for new construction projects in December 2008 and restarted the “clock” in December 2009. In this proposal, the district’s project would have the clock stopped until the funding from state bonds becomes available.

If \$200 million worth of apportioned projects are willing to delay for a year, this would allow that amount of projects on the unfunded list to go to bid immediately and be able to receive a fund release soon thereafter. The \$200 million would follow current rules for first-in, first out apportionments. If projects on the unfunded list are not ready to proceed, they could pass and stay on the unfunded list, and the apportionments would proceed down the list.

This approach follows current practice, where apportionments are placed on a list by date in order, but fund releases are allocated as districts request them.

Question: “How Do You Fund Shovel-Ready Projects?”

Answer: SELL BONDS.

Discussions on how and when to fund school construction projects undoubtedly need to be had, particularly as it becomes clear that the seemingly extraordinary state fiscal crisis is now the norm. Such discussions, however, should be part of a comprehensive review of the School Facility Program (SFP) and potential structural reforms.

The recent murmurs of alternatives to allocating SFP funds outside of the *legal* “First In-First Out” process do little if anything to stimulate the state’s slumping economy and spur new jobs. Yet these discussions and the one to be had at a special meeting of the Implementation Committee on March 4, 2010 threaten to undermine a fundamental safeguard of the SFP and erode what little confidence school districts have left in the program.

The proposals – both radical and modest – to change the established funding process have serious consequences that must be considered, including:

- **Temporary Solutions Are Usually Permanent** – What may seem sensible under duress may not make sense or be the fairest and best solution for the long-term. Districts need to ask themselves if this is the beginning of a new form of Priority Points that we were exposed to with *Godinez v. SAB*? Districts need to understand that projects currently in line for funding may *never* get funded because there is no assurance if the safeguard is removed that they will qualify under new priority funding criteria. Funding “shovel-ready” projects assumes that school districts that fronted State dollars and completed their projects do not get funded before districts that have yet to break ground.
- **State Exposure to Litigation** – Any district that is harmed by a change in the funding process may have grounds to sue the State for damages as SFP Apportionments by law entitle a district to State funds. Any major change to the apportionment policy could require review of voter-approved bond act requirements.
- **Equity Issues** – “Shovel-Ready” projects will reside only with districts with healthy local resources that have been able to bridge the state funding crevice.

What Does Line Jumping, that is Shuffling the Deck, Get Us?

Shuffling the deck for the \$530 million in apportionments after the game began is not a solution to sustained jobs creation. The solution to creating new jobs for California is to sell the school bonds the voters have already approved. Rather than focusing on how the deck of apportioned projects can be shuffled, the effort should be put into doling out more cards.

If the State sold **\$2.3 billion** in education bonds to fund the backlog on the Approved but Unfunded list, school construction projects on that list can create over **100,000 jobs** for California *without trifling with the funding process legally established by the SAB*.

Re: The matter of the \$531,722,893 in Apportionments

Dear Lisa:

We have had discussions with members of the Legislature, their staff and leaders of several state agencies about the matter of the \$531 million in active apportionments available for projects. At issue is pressure from within the Capitol to take funds apportioned, therefore legally promised, to one district and to offer the funds to an "unfunded" district project. It is important to note that according to law and regulation districts have an 18-month period after an apportionment is made through which it may access funds provided by those apportionments.

It is important as well to note that apportionments are "full and final" (Ed Code 17070.63) and that a district may decline the apportionment by formally rescinding their project. The State however, must honor the promised funding by holding it for the district through the 18th month.

It is also important to note that the \$531 Million includes \$249,979,901 for 222 Career Technical Education projects (CTE). OPSC staff and the Board recognize that CTE projects follow a different approval process than that used for other projects such as New Construction and Modernization. In the CTE program the State Department of Education approves the project in a competitive process, the Office of Public School Construction then receives the project and prepares it for SAB approval, the Board then makes an apportionment, which is "full and final," and then the project is filed with the Division of the State Architect for review and approval. Districts cannot enter into contracts until DSA approval has been granted, therefore approximately half of the \$531M is within DSA and are **not** shovel ready. Districts are prohibited by law from signing contracts until DSA has completed plan check and fully approved the project.

Of the remaining apportionments the attached chart provides a breakdown.

Project Type	# of Projects	Total Apportionments
New Construction:	49	\$ 87,040,306.00
Modernization:	51	\$ 126,785,863.00
CTE (New/Mod):	222	\$ 249,919,901.00
Joint Use:	14	\$ 13,930,454.00
COS:	1	\$ 12,903,722.00
Charter:	3	\$ 30,233,695.00
ORG:	3	\$ 10,908,952.00
		\$ 531,722,893.00

Alternative
Success Program

The Honorable Alan Lowenthal
State Capitol, Room 2032
Sacramento, CA 95814

Dear Senator Lowenthal:

California school districts are ready to create nearly 120,000 new construction and related jobs. These new jobs would be created by funding school construction and renovation projects that have been approved or are in line to be approved by the state, have been approved by the Division of the State Architect (DSA), and have met the requirements of the California Environmental Quality Act (CEQA).

Santee School District has \$31 million in *shovel ready* projects and would be able to move forward with the release of our State matching funds of \$38 million (currently on the Unfunded Approval List) from the State Allocation Board (SAB). The only piece missing is for the state to honor its commitment to match our local funds.

Specifically, state funding would provide about 650 local workers with jobs this summer. These construction jobs could result in an increase in state sales and income tax and a reduction in unemployment insurance costs.

We are eager to get our community back to work and hope that funds will be available and released by the SAB soon. A release will allow our district to complete its school construction projects and increase equity in classrooms.

Santee School District believes that funding these projects would create more jobs and employ more people faster than the Governor's \$500 million budget proposal, as well as to meet the critical facility needs of our local students.

To create the most jobs possible, Santee School District would like our *shovel ready* projects be approved in date order funding for *shovel ready* projects.

Thank you for your consideration.

Sincerely,

Christina Becker

STATE ALLOCATION BOARD
IMPLEMENTATION COMMITTEE MEETING
March 4, 2010

SEISMIC MITIGATION PROGRAM

PURPOSE OF REPORT

To present Division of the State Architect's (DSA) analysis of the Seismic Mitigation Program (Seismic) criteria.

BACKGROUND

Public school buildings in California exceed the seismic standards required for most other buildings and have had an excellent history of performance when subjected to large earthquakes¹. Since the passage of the Field Act in 1933, no school has collapsed due to a seismic event, and there has been no loss of life. Despite this record, some school facilities are potentially at risk in a seismic event.

November 2002- Division of the State Architect Analyzes Potentially At Risk Facilities

In November 2002, the Division of the State Architect (DSA) identified over 7,500 buildings that may not perform well in earthquakes in a report entitled "Seismic Safety Inventory of California Public Schools"². The list was based on the DSA's review of construction documents. Many districts throughout California have independently implemented seismic retrofit programs; therefore, many of these buildings have already been rehabilitated, replaced, demolished, or are no longer used for students and teachers. The number of buildings still at risk is indeterminable, and detailed seismic evaluations would be required.

September 2007- First Seismic Regulations Approved- Defining Most Vulnerable Buildings

In response to concerns raised by the DSA report, Assembly Bill 127, Statutes of 2006 (Nuñez/Perata), provided up to \$199.5 million for seismic repair, reconstruction, or replacement of the most vulnerable school facilities. Law did not define "Most vulnerable" and structural evaluations of the buildings identified by the DSA as potentially at-risk are not required. Thus, the number of buildings with a potential for a catastrophic collapse is indeterminable.

In order to ensure the statutory focus on the most vulnerable facilities, and considering the limited amount of funding available, the DSA interviewed seismic evaluation experts and engineering geologists to determine an objective methodology for determining if a building qualifies as one of the most vulnerable buildings. The criteria recommended by the DSA was vetted at five Implementation Committee meetings and was approved by the SAB in September 2007. Buildings are eligible for Seismic funding based on (a) the building structure type, (b) the building's geographic location (i.e., the ground shaking intensity factor), (c) occupancy by students and staff, and (d) the presence of an engineer's report concluding that the building has a potential for catastrophic collapse. The original estimate of facilities likely to be eligible for funding was 77. An analysis completed by the Office of Public School Construction revealed that the \$199.5 million may be sufficient to fund the 77 facilities without creating an additional unfunded list.

August 2009- Regulations Approved to Expand Definition of Most Vulnerable Buildings

Extensive outreach conducted by the OPSC and the DSA revealed that many of the 77 facilities believed to be eligible were either rehabilitated, replaced, demolished, or were no longer used by students or staff. A revised list showed only 25 facilities likely to be eligible for Seismic funding.

¹ Division of the State Architect. November 15, 2002. Seismic Safety Inventory of California Public Schools.

² Required by Assembly Bill 300 (Corbett, Statutes of 1999)

With direction from the SAB in December 2008 to find ways of promoting participation in the program, the OPSC, in conjunction with the DSA, the Department of Finance, and the Seismic Safety Commission, analyzed the most vulnerable building types and geographic zones, along with estimated costs to the State. Using a list of assumptions,³ a determination was made that the definition of most vulnerable buildings could be expanded while still maintaining that the \$199.5 million may be sufficient to fund the additional buildings identified. At the August 2009 SAB meeting, the SAB expanded the definition of most vulnerable facilities. The analysis completed identified 48 facilities that may be eligible for Seismic funding under the revised definition.

DISCUSSION

August 2009 – SAB Direction

At the same August 2009 meeting in which the regulations were revised to expand the definition of most vulnerable buildings, the SAB approved a second motion requesting the DSA to:

- Develop new criteria for any school building that has been declared as part of an engineering study to be in imminent threat of collapse during a seismic event.
- Consider the limited amount of funding available because there will be no Seismic unfunded list for projects beyond the \$199.5 million in bonding authority.

In addition, a board member raised the issue of discussing whether or not a district should be required to exhaust other State facility funding if they use the new criteria being proposed by the motion above.

The DSA has prepared the attached analysis to solicit input from Stakeholders.

AUTHORITY

EC Section 17075.10(a) states: "A school district may apply for hardship assistance in cases of extraordinary circumstances. Extraordinary circumstances may include, but are not limited to, the need to repair, reconstruct, or replace the most vulnerable school facilities that are a Category 2 building, as defined in the report submitted pursuant to Section 17317, determined by the department to pose an unacceptable risk of injury to its occupants in the event of a seismic event."

SFP Regulation Section 1859.2. states: "Most Vulnerable Category 2 Buildings," as defined by the DSA, means the building is located where the short period spectral acceleration is 1.68 g or more based on the 2002 United States Geological Survey National Seismic Hazard Maps adjusted for site class factors; the building is designed for occupancy by students and staff; the building type is either C1 – Concrete Moment Frame, C1B – Reinforced Concrete Cantilever Columns with Wood Roofs, PC1 – Precast/Tilt-up Concrete Shear Wall with Concrete Floor and Roof Diaphragms, PC1A – Precast/Tiltup Concrete Shear Wall with Flexible Roof, PC2A – Precast Concrete Frame without Concrete Shear Walls and with Rigid Floor and Roof Diaphragms, PC2 – Precast Concrete Frame and Roofs with Concrete Shear Walls, C3A – Concrete Frame with Infill Masonry Shear Walls and Flexible Floor and Roof Diaphragms, or URM – Unreinforced Masonry Bearing Wall Buildings; and a structural report is provided by a structural engineer that demonstrates the lateral force-resisting system of the building does not meet collapse prevention performance objectives and the specific deficiencies and reasoning for concluding that the building has a potential for catastrophic collapse.

SFP Regulation Section 1859.82(a) states: The total available funding for seismic mitigation related and ancillary costs for the Most Vulnerable Category 2 Buildings is \$199.5 million for projects where the construction contract was executed on or after May 20, 2006, and the project funding provided shall be for the minimum work necessary to obtain DSA approval.

ATTACHMENT

Division of the State Architect (DSA) Analysis of Options for Increasing Participation in the Seismic Mitigation Program

ISSUE

At the August 26, 2009 State Allocation Board (SAB) meeting, the SAB requested that the DSA investigate additional options for increasing school district participation in the Seismic Mitigation Program.

The OPSC had surveyed school districts in August 2009 in an attempt to determine the reason for a lack of participation in this program. Many districts didn't respond; however, of those who did respond, it appears that the lack of participation in the Seismic Mitigation Program is primarily due to insufficient local matching funds and not a function of the eligibility criteria.

The DSA is not aware of any options that will eliminate this barrier to participation in the Seismic Mitigation Program. Nor is the DSA aware of any options that will increase program participation without the risk of diverting funds from the "most vulnerable" facilities to less vulnerable facilities or leaving many projects unfunded and exposing school districts and the State to liability.

STATE ALLOCATION BOARD REQUEST

The SAB requested that DSA define "imminent threat of collapse" so that it could be used as eligibility criteria for the Seismic Mitigation Program that would provide a better measure of facility collapse potential. As previously noted, the DSA developed the Seismic Mitigation Program criteria defining the "most vulnerable" school facilities using information developed for the Hazards United States Multi-Hazard (HAZUS-MH) methodology. HAZUS-MH is a nationally applicable standardized methodology that estimates potential losses from earthquakes, hurricane winds, and floods developed by the Federal Emergency Management Agency. The HAZUS-MH methodology estimates building damage and casualties from earthquakes based on United States Geological Survey (USGS) mapping. A ranking of the vulnerability of various building types can be determined by comparing the probability of suffering complete damage and collapse at various earthquake generated ground accelerations with the building type. However, there is no nationally accepted, applicable standardized methodology available to support DSA recommending a definition of "imminent threat of collapse". Without a clear definition of this type, the evaluation of a building for potential collapse would be subjective and may lead to less vulnerable buildings being included in the eligible list. Additionally, there is no database of buildings that may pose an imminent threat of collapse and determining the number of buildings that may be eligible using this new definition is not possible at this time, thus it is impossible to estimate the potential financial exposure that the definition would impose.

While DSA is not the appropriate entity to define "imminent threat of collapse", it is feasible to have DSA develop time-based performance assessments that can be used to determine the probability of casualties, financial loss (damage), or downtime over a given period of time. For example, the number of expected casualties over a fifty-year period could be selected as the parameter of interest. Buildings could be ranked based on relative seismic performance - from the worst performance (those buildings with the highest number of expected casualties) to the best (those with the fewest number of expected casualties). The advantage of this approach is

that if it is applied to a group of buildings (say all school facilities in areas with ground shaking potential in excess of 1.5g), the analysis could rank buildings by risk, considering the strengths and vulnerabilities of the structure and the ground shaking potential at the site, without limitation by structural type or system. However, there is no funding source available at this time to cover the costs associated with the development of a methodology for the study. The cost to develop the methodology for application to school buildings is estimated at approximately \$50,000 and the estimated cost of the required assistance from outside technical resources is approximately \$150,000.

CONCLUSION

The very fact that DSA, as required by statute, identified the most vulnerable school facilities and determined that they pose an unacceptable risk of injury to its occupants in the event of a seismic event, means that the continued use of these facilities creates a potential liability to both the school districts and the State. The DSA believes that it would be inappropriate to change the criteria in any way that allows the Proposition 1D funding to be used on any facilities that don't meet the existing criteria.
