As a technology leader in payment processing, U.S. Bank empowers clients to stretch their program limits with innovative access tools. Our award-winning program management and reporting tool, U.S. Bank Access® Online, offers a platform that can be easily configured and quickly deployed to meet the unique needs of our clients.

U.S. Bank continues to enhance the payment capabilities of Access Online, and we are pleased to announce two additional pieces of functionality. Here is your chance to preview these new Account Setup and Maintenance tools.

Effective Dating

This latest piece of functionality provides program administrators the ability to schedule dates for account maintenance changes. Both temporary and permanent adjustments can be made in advance, thus eliminating the need to track changes with manual reminders and reducing the number of errors.

User Profile

A user profile gives a client the ability to log into and use Access Online. By utilizing User Profile Setup and Maintenance a program administrator will have immediate access to create and edit cardholder information and manage account user profiles. Not only does the new functionality expedite both the setup and maintenance process for program administrators, but it also provides users immediate access to the organization's payment solutions.
