ComsitePro – Statement of Work

ComSitePro™ for Windows is a proprietary software, written and distributed by RCC Consultants, is an integrated wireless communications radio site interference analysis software that the State of California DGS Telecommunications Division (TD) uses for resolving existing and potential radio frequency interference at all state's telecommunications sites.

DGS TD already owns several licenses of this software package and will be procuring additional licenses on a as-needed basis in the future. ComSitePro™ performs intermodulation signal level and Transmitter Noise/Receiver Desensitization Analyses based on actual site conditions automatically accessing equipment manufacturers' transmitter noise and receiver desense curves, vertical and horizontal space isolation graphs, insertion and rejection losses for duplexers, bandpass/notch cavity filters combiners, isolators, preselectors, and other filter and multicoupling devices.

ComsitePro – Technical Support

RCC provides free technical support for the first 90 days. The annual technical support, which includes software upgrades, is optional and the state will not be purchasing that option with this purchase. TD has elected not to purchase the technical support at this time due to the high cost of this option. The annual technical support option is only available on a per-license basis, not on a per client basis. Therefore the state would have to purchase the annual support for every license of ComsitePro.

The initial free technical support is available Monday through Friday from 8:30 am to 5:00 pm EST.
