## Van Ness and Geary Campus

### Overview

### Van Ness and Geary Campus

The next generation of health care at the Van Ness and Geary Campus will be delivered in two state-of-the-art facilities essential for San Francisco patients. CPMC 2020's forward-thinking construction concepts and sustainable designs are adding 274 patient beds in a modern acute care hospital. The hospital, a twelve-story home for the women's, children's, cardiology, oncology, emergency care and transplant departments, will create 740,000 square feet of diagnostic, treatment, and inpatient bed space. An adjacent 253,000 square foot, nine story medical office building will accommodate outpatient services and support the health care professionals next door. The hospital and medical office, respectively LEED and LEED-Silver certified, will connect by a pedestrian tunnel below ground, and add 376,000 square feet of underground parking space.

HerreroBOLDT and our Integrated Project Delivery Team is working with local partners and subcontractors to optimize the construction process. An integrated communications system used during construction of the Van Ness and Geary Campus ensures coordinated design and construction delivery. The latest construction practices streamline the building process, allowing our team to meet the challenges surrounding building health care facilities that adhere to California's safety standards and address the community's well-being.
