Re: Express Terms for Proposed Building Standards of the Office of the State Fire Marshall (SFM)
Regarding the 2007 California Fire Code, California Code of Regulations Title 24, Part 9

Dear Ms. Marin:

On behalf of Cedars-Sinai Medical Center I am writing in support of the aforementioned Express Terms being proposed by the State Fire Marshall to be included in Section 443 of the 2007 California Building Code. In this section of the Code, the L-Occupancy provides important controls and safety provisions for any research and development laboratory containing hazardous materials in the State of California. The L-Occupancy is critical to the ongoing growth and development of the research and biotechnology industry in California.

The research and biotechnology industry is a quickly evolving industry that requires a broad range of biological and chemical work to be performed in a laboratory environment. These facilities are best located in proximity of major research institutions. Researchers at educational institutions such as Cedars-Sinai Medical Center are also performing similar type of experimental activities. Therefore, clarifying and codifying the L-Occupancy in the 2007 California Building Code for use by any such research and development laboratory will ensure that all such facilities be developed with the same controls and safety provisions.

We believe that the State Fire Marshall has the authority to propose these code amendments as described in the California Health and Safety Code Section 18949.2(b). The State is well served by the work that the State Fire Marshall has done in ensuring that all laboratory facilities throughout the State of California are built to the same safe standards. Additionally, we support the proposed amendments to the 2007 CBC that changes the 10 story height restriction to 12 stories for Type I-A Buildings.

We are supportive of the extensive and inclusive process created by the State Fire Marshall's Office in the development of the L-Occupancy. It has been a very positive, constructive process that has addressed all the issues and included representatives of industry and regulatory organizations from across the State. We want to thank State Fire Marshall Kate Dargan, Chief Tonya Hoover, and their staff for their leadership in this important endeavor.

We heartily endorse these Express Terms as they serve to clarify the requirements for any research and development laboratory and to enhance the safety measures and controls that will ensure safe operations. Please adopt the Express Terms as submitted.

Sincerely,

Thomas M. Priselac
President and CEO
