California Building Codes Commission

My name is Shaun Horne I am writing to express my desire to see gray water codes in urban areas further developed to support re-use systems, conservation, and better water management for California. As water scarcity increasingly develops along side California projected population growth it is viatal that we conserve our states water resources to help curve the fluctuations in our climate that we are expecting and experiencing.

Agriculture and urban areas will continue to battle for water unless the building commission begins to advocate, recognize, and support gray water systems in all new developments as well as in the existing infrastructure of California. It is in the interests of your children and grandchildren that we must work together to curve the consumption rate of water and protect the vital ecological services provided by the unique climate of California.

Gray water will bring about a natural evolution of the built environment that will prove to benefit and support our wonderful lives in California for centuries to come. We are creative people looking for self preservation through sound ecological designs. Please support Gray water and bring about the necessary changes.

Sincerely
Shaun Corwin Horne
Employee of the Sonoma County Water Agency
and Graduate Student at SSU in Watershed Management
