RE: Statewide I.T. Commodity Contracts involving HP

DGS has received numerous inquiries regarding the recent announcement by HP regarding their product lines. HP announced late last week that it will discontinue operations for webOS hardware devices, specifically the TouchPad and webOS phones (smart phones). Neither product is available on a mandatory Statewide contract.

This product announcement does not affect any of the current mandatory contracts including those for desktop, notebook, workstation or monitor products. HP has confirmed that it is committed to its core business operations and that there will be no affect on delivery or warranty obligations. There is no valid reason why a department should refrain from using the mandatory statewide contract.
