

Secure Community Reentry Facility (SCRF)

CDCR's current prototype requires a site that is approximately 15 acres, with minimum dimensions of 600' to 650' x 1000'. However, the department is developing an alternative prototype that may require approximately 5 acres with minimum dimensions of approximately 460' to 530' x 430'. The department prefers an exchange site that conforms to the approved 15 acre prototype, but will consider the smaller site that is subject to CDCR approval.
